## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Church et al. (6501984). Church et al. disclose a system for performing electrical impedance tomography comprising multiple sets of electrodes in different planes (columns 2 lines 43-67, column 4, figures 2-4). Church et al. also teach a current source configured to inject current between the electrodes with switches to connect the electrodes and a processor to control the switches (column 4, column 13 lines 5-11). Church et al. also teach a voltage measurement device such as an amplifier to measure voltage between the electrodes (column 4). The reference further teaches element for biasing the electrodes radially inward and outward with a support structure to support the

electrodes(column 3), a gel storage container (column 5 lines 61-67, column 6 lines 1-19). Church et al. also teach said system to enable a patient body part to be placed between the lower and upper portions (figure 12) and configured to generate a three-dimensional image corresponding to the current density distribution (figures 12-13).

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over Church et al. in view of Hunter et al. (2004/0097806). Church et al. do not explicitly teach measuring voltage using a signal synchronized with the R wave of an electrocardiogram. In the same field of endeavor, Hunter et al. disclose a system which monitors electrical impedance via electrodes ([0064]), measuring voltage using a signal synchronized with the R wave of an electrocardiogram ([0047]). It would have therefore been obvious to one of ordinary skill in the art to use the teaching by Hunter et al. to modify the signal by Church et al. for the purpose of gating the data acquisition with the R wave of the ECG signal or physiological signal.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO 892 for relevant references of interest.
